The present invention relates to the isolation of human

bactericidal/permeability-increasing (BPI) protein from polymorphonuclear

leukocytes (PMN). BPI can be produced by growing in a culture medium,

host cells transformed or transfected to express BPI encoded by

chost cells transformed or transfected to express BPI encoded by

complementary strand, or a human BPI DNA sequence that hybridises under

stringent hybridisation conditions with the BPI polymucleotide sequence

or its complementary strand. BPIs are useful against a wide range of Gram-

negative bacteria, particularly for the treatment of diseases caused by

cram-negative bacteria such as bacteraemia or sepsis, infections caused

by Escherichia coli, Salmonella, Klebsiella or Pseudomonas, and skin

infections which occur in bedridden patients suffering from decubitus

cram-negative bacteria and national accessor also be used as a model

for the design of new antibiotic agents, to provide sequence information

on BPI to direct the design of future generations of antimicrobial agents

pecific for Gram-negative bacteria, and to be used as probes in

molecular biological techniques. The BPI protein sequence is also useful

in protein therapy. The present sequence represents the human BPI protein

This sequence is encoded by the plasmid pING4512. pING4512 was

constructed using the primer sequence given in AAG52480. Plasmid pINC4503

was cut with Alwal. the ends made blunt with 74 DNA pOlymerase, and the
DNA then cut with Sall. The resultant approx. 700bp Sall/blunt fragment
Contains the 30 bp 5' untranslated region and the DNA encoding the signal
mains acids of bactericidal/permeability-increasing
protein (BPI). 1gG heavy chain (HC) sequences, which also included the
hinge region of the IgG HC were PCR amplified from plasmid pMB27 using
these primers. Plasmids such as pING4512 may be used to produce fusion
conditions and their sequelae including endotoxin related shock and
conditions associated with it, such as disseminated intravascular
conditions anemia, thrombocytopenia, leukoppenia, adult respiratory
distress syndrome, renal fallure, hypotension, fever and metabolic
acidosis. Proving BPI or a fragment of it, as part of the fusion with an
immunoglobulin heavy chain constant region provides the potential
cacharide complement binding, bivalent binding to lipopolycacharide complement binding and increasing placental transfer. (Updated
on 25-MAR-2003 to correct PN field.) This sequence represents the N-terminal of recombinant bactericidal/permeability (rBPI) protein. This expression product encoding the 31 residue signal protein and the first 199 amino acids of the N-terminal of mature human BPI has a molecular weight of 23 kD and is designated rBPI-3. In binding assays rBPI-23 was shown to have three separate functional domains with heparin-binding activity, at least three major domains with significant Limulus amoebocyte lysate (LAL) inhibition and one region with bactericidal activity. BPI, or active fragments of it may be used to treat and prevent the effects of chronic inflammatory disease states such as arthritis, psoriasis, inflammatory bowel disease, crohn's disease and asthma. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 25-MAR-2003 to correct PN field.)

The sequence given is taken from Grey et al., and varies to that from Gazzano-Santoro et al. In the latter, the valine at position 141 is specified by GTG rather than GTC and residue 185 is glutemaic acid (specified by GAG) rather than Iysine (specified by AAG). The expression vector also encodes for a 31 residue signal sequence. rBPI23 or biologically active derivs. are useful in the tracting of a subject suffering from any of the physiological effects of LAM (lipoarabinomannan) from Mycobacteria. (Updated on 25-WAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   YQEAGVLKMTLRDDMIPKESKFRLTTKFFGTFLPEVAKKFPNWKIQIHVSASTPPHLSVQ 360
                                                                                                   binding protein deriv. and hybrid protein binds to lipo:polysaccharide lacks CD14-mediated immuno:stimulatory properties, used to treat Gramnegative bacterial infections and associated conditions.
                                                                                                                                                                                                       increasing protein (rBPI). The protein contains the lipopolysaccharide (LPS) binding domain fragments described in ARA68919-R68921. The fragments are used in the construction. of hybrid proteins for the treatment gram-negative bacterial infections and associated conditions. (Updated on 25-MAR-2003 to correct PN field.)

The BPIP is then isolated and can be used to control bacterial infections. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recovery of recombinant endotoxin binding protein - by culturing transformed cells in medium contg. cation exchange material, useful for treatment of bacterial infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   from the granules of mammalian polymorphonuclear neutrophils. The mol.

from the granules of mammalian polymorphonuclear neutrophils. The mol.

wt. of the entire human BPI protein is approx. 55,000 daltons. The AA

equence of the entire human BPI protein, as well as the DNA encoding the

protein, have been elucidated in Figure 1 of Gray et al., J. Biol. Chem.

264:9505 (1989) and are incorporated by reference. In Gazzano-Santoro et

al., Infect. Immun. 60:473-4761 (1992) an expression vector was used as

seconding a recombinant expression vector was used as

the 31- residue signal sequence and the first 199 AAs of the N-terminus

of the mature human BPI, as set out in Figure 1 of Gray et al., except

that Val151 is specified by GTG ratether than GTC, and residue 185 is Glu

(specified by GAG) rather than Lys (specified by AAG). Recombinant

coloprotein (rBPI) has also been produced having the sequence

conced for rBP123 and the the exception that residue 417 is Ala (specified

by GCT) rather than Val (specified by GTT). In the spec., the BPI protein

product is used for the treatment of humans exposed to bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                o

```
The amino acid sequence of a recombinant bactericidal/permeability increasing (BPI) protein. BPI protein can be isolated from the granules of mammalian polyworphonuclear neutrophils (PMN). The protein has antibacterial activity associated with 3 functional domains: I (AAR81085), II (AAR81086) and III (AAR81087) present in N-terminal region of the BPI holoprotein (AAR81245). The antibacterial regions were used to design the antifungal peptides AAR81083-4, AAR81088-R81244 and AAR81248-R81308. The peptides are used to treat fungal infections together with other antifungal cpds e.g. fluconazole or amphotericin B. The antifungal activity of the peptides may also be enhanced by addition of a nipopolysaccharide binding protein (LBP) e.g. AAR81246. The peptides can be used to treat fungal infection, esp. Candida albicans. They are also useful for killing or inhibiting fungi in vitro e.g. for sterilising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

having heparin binding and neutralisation, LPS binding and neutralisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Recombinant bactericidal/permeability increasing protein (rBPI) is encoded by AAT0951. BT (bactericidal permeability-increasing) peptides (AAR80996-81081 and AAR8253-372) each have an amino acid sequence that is dariv. of a BPT functional domain (or a variant) having at least one of the biological activities of BPI, such as heparin binding or neutralisation, lippoplysaccharide (LPS) binding or neutralisation or bactericidal activity. The BPI peptides are based on the amino-terminal portion of BPI, esp. functional domains I, II, and III (BPI residues 17-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                  The patent relates to the new use of a BPI protein product for treating adverse effects associated with depressed reticuloendothelial system function, especially diminished function of Kupfer cells of the liver resulting from physical, chemical or biological insult. Physical insult is exemplified by partial or total hepatectomy such as accompanies transplantation, and trauma. Chemical insult is exemplified by the results of exposure to hepatotoxic substances such as chloroform, glucosamine, carbon terrachloride and echanol. Biological insult is exemplified by (non-)infectious diseases such as viral hepatitis and chronic inflammatory hepatitis. The BPI protein product is preferably FBPI-21, FBPI, FBPI-42 dimer or one of 222 specified BPI peptides. The present sequence is that of FBPI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KVGWLIQLFHKKIESALRNKMNSQVCEKVTNSVSSKLQPYFQTLPVMTKIDSVAGINYGL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241 VAPPATTAETLDVQMKGEFYSENHHNPPPFAAPPWEFPAAHDRMVYLGLSDYFFNTAGLV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        YQEAGVLKMTLRDDMI PKESKFRLTTKFFGTFLPEVAKKFPNMKIQIHVSASTPPHLSVQ

This is the amino acid sequence of a bactericidal/permeability increasing (BPI) protein. BPI is a protein isolated from the granules of mammalian polymorphonuclear leukocytes. It is a 55 kD cationic protein which has potent antibacterial activity against a broad range of Gram -ve bacteria. The sequence was used to generate the peptides (AAWOS851-W06074) which were screened for bactericidal activity against B.coli strains J5 and 0111:94 in a radial diffusion assay. The BPI peptides can be used to enhance the treatment of Gram -ve bacterial infections, prophylactically for patients about to undergo surgery or for disinfection or sterilisation. Administration of the BPI peptides together with an antibiotic results in synergistic or potentiating bactericidal effects greater than the effect of the individual peptide or antibiotic. Also the BPI peptides can reverse the resistance of certain Gram -ve bacteria to certain antibiotics e.g. carbenicillin, cefazolin. (Updated on 25-WAR-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The recombinant BPI (bacterial permeability-increasing), is designated rBPI23. BPI peptides (AAR76244-458) were screened for bactericidal effects on E. coli strains J5 and 011:184 in a radial diffusion assay. BPI peptides which retain antibacterial activity are expected to improve the therapeutic effectiveness of antibiotics when concurrently administered. Concurrent administration of BPI protein products and antibiotics is Bhown to reverse resistance of a variety of gram-negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BPI protein and an antibiotic in a medicament - for treatment of gram-negative bacterial infection.
                                BPI peptide; bacterial permeability-increasing peptide; bactericidal; therapeutic effectiveness; antibiotic; concurrent administration; reverse resistance; gram-negative bacteria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                           The known anti-microbial properties of bactericidal/permeability increasing protein (BPI) can be enhanced by administering the BPI with a stabilising protein (BPI) can be enhanced by administering the BPI with a stabilising polyoxypropylene-polyoxyethylene block copolymer (poloxamer). Therapeutic compositions pref. contain one of the poloxamers 333, 334, 335 or 403 and opt. comprise EDTA. They are useful for treating bacterial and fungal infections. The present sequence is that of human recombinant BPI and was disclosed in Gray et al., J.Biol.Chem., 264:9505 (1989)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

TITLE OF INVENTION: Anti-Fungal Peptides

NUMBER OF SEQUENCES: 211

CORRESPONDENCE ADDRESS:

ADDRESSE: MCANDTews, Held & Malloy, Ltd.

STREET: 500 West Madison Street, 34th FloorDrive

CITY: Chicago
                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
CERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NAME: MCNicholas, Janet M.
REGISTRATION NUMBER: 32,918
REFERENCE/DOCKET NUMBER: 100-238/11021US01

| Sequence 2, Application US/09866514
| Sequence 2, Application US/09866514
| Patent No. US20020137050A1
| Patent No. US20020137050A1
| GENERAL INFORMATION: THERAPEUTIC USES OF BACTERICIDAL/FERMEABILITY-INCREASING
| TITLE OF INVENTION: PROPIED REAGMENTS
| FILE REFERENCE: 28297/32248B
| CURRENT APPLICATION NUMBER: US/09/866,514
| CURRENT FILING DATE: 1999-05-10
| PRIOR APPLICATION NUMBER: 09/309,217
| PRIOR FILING DATE: 1999-05-10
| NUMBER OF SEQ ID NOS: 6
| SOFTWARE: Patentin Ver. 2.0
| TENGRAP OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND OF SECOND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 DSFKIKHLGKGHYSFYSMDIREFQLPSSQISMVPNVGLKFSISNANIKISGKWKAQKRFL 120

SEQ search request 10/629516

I need your approval for this search request.

I would like to request an expedited sequence search for this case because it is due this bi-week. Please search commercial and published patent databases.

10/629516

SEQ ID NO: 2,

SEQ ID NO: 2, amino acids 10-193

Please print out the result.

Thanks. Rita
